

WebXpanse Clarity Onboarding and Outreach Playbook

Purpose

This document combines the core go-to-market, onboarding, outreach, and demo assets needed to position and sell Clarity as it exists today.

Use this as the working sales playbook for:

- founder-led outbound
- onboarding conversations
- demos
- pricing discussions
- partner and referral conversations

Product Positioning

Clarity is an AI-assisted CRM and execution workflow for founder-led teams that manage sales through WhatsApp, email, tasks, and pipeline.

It helps teams keep customer conversations visible, follow up consistently, and move deals forward without relying on memory, scattered inboxes, or disconnected tools.

Core promise

- fewer missed follow-ups
- faster response to customer conversations
- clearer next actions
- better visibility into what is stalled
- more reliable pipeline movement

What it is not

- not a generic "AI everything" product
- not just another contact database
- not a brand-only story without practical workflow value

Positioning line

Clarity helps founder-led teams manage WhatsApp, email follow-up, tasks, and pipeline in one AI-assisted workflow so fewer opportunities go cold.

Target Niche

Start with founder-led service and sales businesses that rely on WhatsApp and email to close deals.

Best initial niches

- interior, furniture, kitchen, and door/window businesses
 - contractors and installers
 - distributors and wholesalers
-

- agencies and relationship-led service firms

Why these fit

- they sell through conversations, not just forms
- follow-up discipline is often weak
- owners usually carry too much context manually
- WhatsApp is often operationally critical
- ROI is easy to explain: fewer missed leads, faster replies, better deal movement

Sales Brief

Who it is for

- founder-led service businesses
- small sales teams
- businesses that sell through WhatsApp and email
- operators who need better follow-up discipline and pipeline visibility

Core problem we solve

Most teams are not losing business because they lack leads.

They lose business because:

- follow-up is inconsistent
- WhatsApp and email conversations are scattered
- tasks live in people's heads
- pipeline movement is unclear
- owners become the system

What buyers get

- contact management
- pipeline visibility
- task ownership and next-action tracking
- WhatsApp and email workflow visibility
- AI digesting and guidance in higher tiers
- clearer daily execution

Main value message

Clarity helps founder-led teams stop losing momentum between messages and meetings.

It turns customer conversations into visible next actions so fewer opportunities go cold and more deals move forward.

Offer and Pricing

Clarity Setup

One-time onboarding and implementation.

Included:

- contact import
- pipeline configuration
- WhatsApp and email workflow setup
- task and follow-up structure
- onboarding support

Suggested price:

- \$500 to \$2,000 one-time

Clarity Core

For founder-led teams that need one place to manage conversations, tasks, and pipeline.

Included:

- contacts
- pipeline
- tasks
- WhatsApp and email workflow visibility
- stage and next-action tracking
- team ownership visibility
- basic reporting

Suggested price:

- \$149 to \$299 per month

Clarity Growth

For teams that want AI assistance, stronger automation, and more operational visibility.

Included:

- everything in Clarity Core
- AI daily digest
- AI-guided prioritization
- workflow automation
- reporting and deeper visibility

Suggested price:

- \$349 to \$750 per month

Pricing guidance

- charge for onboarding
- keep monthly pricing simple
- avoid overcomplicated seat pricing early
- price against operational value, not just features

Founder Outbound List-Building Workflow

Goal

Build a weekly list of businesses that are likely to need better WhatsApp, email follow-up, task visibility, and pipeline discipline.

Target:

- 50 to 100 qualified prospects per week

Step 1: pick one niche at a time

Examples:

- kitchen and interior businesses
- door and window companies
- contractors and installers
- distributors and wholesalers
- agencies

Step 2: define the right buyer

Usually:

- founder
- owner
- managing director
- operations lead
- sales manager

Step 3: source prospects

Use:

- Google Maps
- LinkedIn
- Instagram business pages
- Facebook business pages
- local business directories
- trade association lists

Step 4: build one simple prospect sheet

Suggested columns:

- company name
- website
- niche
- city or country
- estimated team size
- founder or owner name
- role
- email
- phone or WhatsApp
- LinkedIn
- source
- outreach angle

- pain hypothesis
- status
- date added
- first touch date
- follow-up date
- notes

Step 5: research fast

Spend 2 to 4 minutes per prospect.

Capture:

- what they sell
- who likely owns growth or sales
- whether they emphasize WhatsApp or direct messaging
- whether they look process-light
- one custom outreach angle

Step 6: score prospects

- A = strong fit, clear pain, contact found
- B = decent fit, some uncertainty
- C = weak fit or missing a way in

Outbound only to A and B.

Weekly outbound rhythm

- Monday: build 30 to 50 prospects
- Tuesday to Friday: add 10 to 15 more each day
- send 10 to 25 personalized messages per day

Outreach Scripts

General Email Script

Subject:

Quick question about your follow-up process

Body:

Hi [First Name],

I came across [Company Name] and wanted to reach out because a lot of founder-led teams I speak with are not losing opportunities because of lead volume, but because follow-up gets scattered across WhatsApp, email, and internal notes.

We built Clarity to help teams manage customer conversations, tasks, and pipeline in one workflow so fewer leads go cold and the next step is always visible.

From what I can see, your team looks like the kind of business where response speed and follow-up consistency matter a lot.

Would you be open to a short demo to see whether this could help your team reduce missed follow-ups and keep deals moving more reliably?

Best,

[Your Name]

General LinkedIn Script

Hi [First Name],

I help founder-led teams manage WhatsApp, email follow-up, tasks, and pipeline in one workflow so fewer opportunities go cold.

A lot of businesses already have leads coming in, but the real issue is that follow-up gets fragmented and momentum drops between messages, quotes, and next steps.

If that sounds familiar, I'd be happy to show you a short demo of how we solve that with Clarity.

General WhatsApp Script

Hi [First Name], this is [Your Name].

I help founder-led teams manage WhatsApp, email follow-up, tasks, and pipeline in one workflow so fewer customer opportunities go cold.

I came across [Company Name] and thought this might be relevant if your team handles sales conversations across chat and email.

Would you be open to a short demo sometime this week?

Niche Scripts

WhatsApp-heavy businesses

Email opener:

I'm reaching out because a lot of businesses that sell mainly through WhatsApp eventually hit the same problem: customer conversations keep moving, but follow-up, task ownership, and deal visibility do not stay organized.

LinkedIn opener:

I help businesses that rely heavily on WhatsApp for sales keep conversations, follow-up, tasks, and pipeline visible in one workflow.

WhatsApp opener:

I help businesses that sell heavily through WhatsApp keep customer conversations, follow-up, tasks, and pipeline organized in one workflow so fewer leads go cold.

Agencies

Email opener:

For agencies, the breakdown usually happens after the first conversation: leads are discussed in chat, proposals are sent by email, next steps are remembered manually, and pipeline visibility becomes fuzzy.

LinkedIn opener:

I help agencies keep WhatsApp, email follow-up, tasks, and pipeline in one workflow.

WhatsApp opener:

I help agencies organize client conversations, follow-up, tasks, and pipeline in one place so fewer proposals and opportunities stall between chats and emails.

Interiors and contractors

Email opener:

Businesses in interiors, fit-out, kitchen, construction, and contracting often lose momentum in the same place: between the first inquiry, the quote, and the follow-up after that.

LinkedIn opener:

I help interiors and contractor-type businesses keep WhatsApp inquiries, quote follow-up, tasks, and pipeline visible in one workflow.

WhatsApp opener:

I help interiors and contractor businesses manage WhatsApp inquiries, quote follow-up, tasks, and pipeline in one workflow so fewer customer opportunities go cold.

Discovery Questions

- How do you currently manage customer follow-up across WhatsApp and email?
- Where do leads usually get delayed or lost?
- Who owns next steps after a customer message comes in?
- How do you track whether a deal is moving or stalled?
- What happens when the owner is busy or unavailable?
- What would improving follow-up consistency be worth to you?

15-Minute Demo Script

Opening

Thanks for making the time. I'll keep this simple and practical.

What I want to show you in the next 15 minutes is how Clarity helps a team manage WhatsApp, email follow-up, tasks, and pipeline in one workflow so fewer opportunities go cold.

I'm not going to give you a generic CRM tour. I'm going to focus on one problem most founder-led teams deal with every week: follow-up slipping between conversations, tasks, and pipeline.

Set the problem

Usually the issue is not a total lack of leads.

It's that:

- a message comes in on WhatsApp
- someone replies later by email
- the next step is not clearly assigned
- the owner still has to remember what happens next
- and then momentum drops

Show the main workspace

What you're looking at here is the operating view.

Instead of having customer context split across chats, inboxes, notes, and someone's head, Clarity brings the conversation, contact, next task, and pipeline movement into one place.

Show conversation to action

A customer sends a message asking about pricing, availability, or a quote.

Normally, this is where things start to break: someone responds, but the follow-up is not structured, the quote is delayed, or no one checks back in.

In Clarity, that conversation can be tied to the contact and pipeline, and then converted into a clear next action.

Show task and ownership

This is one of the most important parts for smaller teams.

A lot of businesses don't lose deals because they never replied. They lose them because there was no clear owner for the next step after the first reply.

Clarity makes that visible.

Show pipeline visibility

One of the most frustrating things for growing teams is not knowing what is genuinely progressing and what is quietly stuck.

Clarity makes it easier to see:

- where deals are in the process
- where follow-up has stalled
- where the team needs to act now
- where momentum is strong

Show AI assist

I don't position AI here as magic. I position it as operational support.

For example:

- daily digesting
- summaries
- suggested next actions
- better prioritization

Translate into outcome

The real value is:

- fewer missed follow-ups
- faster response times
- clearer team ownership
- better visibility into stalled opportunities
- more consistent movement from first message to closed deal

Close

If this feels relevant, the next step is straightforward.

We'd look at:

- how you currently manage leads and follow-up
- where conversations get lost or delayed
- what your team needs visibility on
- and then configure Clarity around that workflow

Clickable Demo Checklist

- [] Open with the problem: missed follow-up, scattered conversations, unclear next steps
- [] State the product clearly: WhatsApp, email, tasks, and pipeline in one workflow
- [] Show the main workspace first
- [] Show a contact or lead record
- [] Show conversation visibility
- [] Show how a message turns into a task or next action
- [] Show owner and assignment visibility
- [] Show due date or follow-up structure
- [] Show pipeline or stage movement
- [] Show what is stalled versus moving
- [] Show AI assistance only after workflow clarity
- [] Show digest, summary, or prioritization
- [] Translate feature into business outcome
- [] Tie the demo to the prospect's pain
- [] Ask a closing question about where they lose momentum today

90-Day Execution Plan

Days 1 to 30

- choose one niche
 - sharpen the landing page for that niche
 - create a simple deck and 2-minute demo
 - build a list of 100 target businesses
-

- start founder-led outbound daily
- target 10 to 15 demos and 3 pilot customers

Days 31 to 60

- onboard the first pilots manually
- document workflow pains and objections
- create 2 case studies
- refine pricing
- tighten onboarding
- target 3 to 5 paying customers

Days 61 to 90

- add referral asks to each successful onboarding
- approach niche-adjacent agencies and consultants
- publish proof and niche messaging
- standardize setup and sales scripts
- target 5 to 10 paying customers

Onboarding Focus

When onboarding a new client, focus on:

- where inbound conversations arrive now
- what the current follow-up process looks like
- where task ownership breaks down
- how pipeline stages are currently defined
- what the owner wants immediate visibility into

Early onboarding wins

- centralize customer follow-up visibility
- create clear next-step ownership
- set up one clean pipeline
- configure digest or task routines
- reduce the need for the owner to manually remember every open loop

Final Internal Reminder

Do not lead with AI.

Lead with:

- missed follow-up
- scattered conversations
- unclear next step
- pipeline momentum
- owner dependence

AI is the support layer. Workflow clarity is the sale.
