

Positioning & Wedge

CONFIDENTIAL — PRE-SEED FUNDRAISING MATERIALS

Core Positioning

Do not position this company as:

- another CRM
- a cheaper Salesforce
- an all-in-one SMB suite

Position it as:

AI operating CRM for distributors and wholesalers in WhatsApp-first markets

Short version:

We help distributors and wholesalers run inbound sales, quoting, follow-up, and collections from a controlled AI-driven operating layer, with CRM as the system of record and system of action.

Why This Wedge Fits The Product

The current product already supports the core pieces of this story:

- unified inbox with email and WhatsApp support
- deals and stage progression
- quotes, invoices, and commercial automation
- tasks and follow-through workflows
- reporting and auditability
- AI control, autonomy gating, and takeover-confidence thinking

This means the pitch can honestly say:

- the CRM stores the context
- the AI handles the operational work
- the governance layer controls risk

ICP

Primary ICP:

- distributors and wholesalers
- 5-100 sales and ops staff
- teams that already sell over WhatsApp, email, and phone
- environments where response speed, quote turnaround, and follow-up discipline directly affect revenue

Best geographies to test first:

- Africa
- Middle East
- other WhatsApp-heavy business environments

First Painful Workflow

The opening wedge is:

inbound inquiry -> qualification -> quote/proforma draft -> follow-up -> deal progression -> invoice/collection follow-through

This wedge is strong because:

- it is high frequency
- it is painful
- it touches revenue directly
- incumbents are usually weak at message-first execution
- AI can visibly save time and recover lost deals

What The Product Is Not Yet Claiming

Do not claim:

- full business takeover today
- full horizontal CRM replacement
- fully autonomous customer communication without guardrails
- enterprise-grade parity with incumbents across every module

Do claim:

- control-heavy AI operations for a narrow workflow
- self-hosted and auditable execution
- progression from copilot to governed autonomy
- expansion from one workflow wedge into a broader operating system

Competitive Story

Use this framing:

- incumbents are broad systems of record
- this product is becoming a system of action
- self-hosting, auditability, and workflow control are not side features; they are part of the buying reason

Better line:

HubSpot and Salesforce help teams record work. We are building the layer that helps teams get the work done in message-heavy sales environments.

Avoid line:

We are a better CRM than HubSpot.

Expansion Path

Expansion after wedge proof:

1. quote and invoice revision automation
2. collections and overdue follow-up
3. task and deal follow-through orchestration
4. broader workflow-generated execution
5. wider system-of-action coverage across the business

Success Criteria For This Positioning

This positioning is working if:

- prospects immediately understand who it is for
- design partners say they would buy the wedge even if they keep their current CRM
- investors repeat the wedge back clearly after one meeting
- the story sounds narrower, more painful, and more fundable than AI CRM
