

MODULE 2

Contacts — Your Most Valuable Asset

Goal: Build, organise, and maintain a contact database that actually helps you close deals.

IN THIS MODULE

- 01 Adding contacts: manual, CSV import, and inbound capture
- 02 Contact fields — what to fill in and what not to skip
- 03 Stages, tags, and filters — organising for scale
- 04 Activity timeline — every touch in one place
- 05 AI insights: risk flags, next best actions, communication intelligence
- 06 Company context — linked deals, tasks, and data quality

The Contacts List — Your Pipeline View

The Contacts page is more than a directory. It shows every lead's stage, quality score, and last activity — so you can spot who needs attention without opening each record.

Adding & Importing Contacts

You can add contacts three ways. Manual is for one-off adds. CSV import is for bulk onboarding. Inbound capture happens automatically through forms, WhatsApp, or email replies.

Contact Fields — What to Fill In

Incomplete contacts reduce AI accuracy and make targeting impossible. Fill these fields on every contact you add.

Quick Edit & Inline Updates

The Quick Edit panel lets you update the most important fields without leaving the contact view. Use it after every call or meeting.

Activity Timeline — Log Every Touch

The Activity Timeline is the history of your relationship with a contact. Every email, call, note, and deal is visible in one scrollable feed. If it's not here, it didn't happen.

Adding Notes

Notes are your private memory for each contact. Use them to capture what was said, what was promised, and what to do next. The rich text editor supports formatting, links, and private-only visibility.

AI Insights — Risk Flags & Next Actions

The AI scans each contact and surfaces two things: what's wrong and what to do about it. Check these panels before any outreach.

Company & Account Context

When a contact is linked to a company, you see all related contacts, shared deals, tasks, and a data quality score in one panel. This is where account-based selling lives.

Module 2 Exercise — Contacts

Step-by-step:

- 1 Go to Contacts ? Import CSV. Download the sample template and fill in 20 contacts.
- 2 Import the file. Review any errors in the import log and fix them.
- 3 Use the Tag filter to segment your contacts: add a tag "ICP" to your best-fit leads.
- 4 Open one contact. Fill in all missing fields shown in the Data Quality panel.
- 5 Add a note to 5 contacts describing where they are in your sales process.
- 6 Check the Risk Flags panel on 3 contacts. Take the suggested Next Best Action for each.
- 7 Review the Communication Intelligence panel — note the preferred channel for each.

QUICK REFERENCE

- " Minimum fields: name + email or phone + stage + lead source
- " Stage must always be set — drives all pipeline reporting
- " Log notes after every call or meeting — "if it's not in the CRM, it didn't happen"
- " Risk flag = act within 24 hours or lose the lead
- " Import URL: acrm.webxpanse.com/contacts_import.php
