

MODULE 4

Deals — Running Your Pipeline

Goal: Turn contacts into revenue by managing every deal through a clear, trackable pipeline.

IN THIS MODULE

- 01 Creating deals and linking them to contacts
- 02 Pipeline stages — matching them to your actual sales process
- 03 Deal cards: value, close date, assigned owner
- 04 Moving deals and logging what happened at each stage
- 05 Spotting stalled deals before they die

The Deals Pipeline

The Deals page is your sales pipeline. Every deal moves left to right through stages. The goal is always: move deals forward or close them — never let them sit still.

? *A deal without a close date is a wish, not a plan. Always set an expected close date — it drives pipeline forecasting.*

- All Deals — full pipeline overview with value totals
- Stage tabs: Prospecting, Qualification, Proposal, Negotiation, Closed Won/Lost
- Deal cards show: title, contact, value, expected close date, owner
- Automation Rollout panel — shows current AI deal automation mode
- List view — spreadsheet layout for sorting and bulk actions

Deals pipeline — stage tabs and deal cards

Creating a Deal

Create a deal the moment a contact shows serious buying intent. Link it to the contact so all activity, notes, and emails appear on both records.

- Click + New Deal from the Deals page or from a contact record
- Title — be specific: "Skyline Phase 2 — 40 Windows" not "Window Deal"
- Value — enter your best estimate even if not confirmed
- Stage — where is this deal right now in your process?
- Expected Close Date — your best estimate of when money changes hands
- Assigned To — who owns this deal? (default: you)
- Link to Contact — connects all communication and activity history

Create Deal form — link to contact

Deal Detail — Full History

The Deal detail view shows everything about this opportunity: the linked contact, deal value, all activities, notes, and tasks. This is where you manage the relationship.

- Deal summary at top: value, stage, probability, close date
- Activity feed — all emails, calls, notes logged against this deal
- Tasks — actions attached to this deal with due dates
- Notes — your private deal observations and negotiation context
- Files — proposals, contracts, or quotes attached

Moving Deals & Logging Progress

Every time you move a deal to the next stage, log what happened. This creates an audit trail and feeds the AI's deal intelligence — it learns what moves deals forward.

? Deals that move forward with logged reasons have 3x higher close rates than those moved without context.

- Change stage via the Stage dropdown on the deal detail
- After every stage change: add a note explaining why it moved
- Add a task: "Next action" so nothing falls through
- Update the expected close date if circumstances changed
- Log a call or email activity to record the conversation that caused the move

? Never move a deal without logging why. "Moved to Negotiation — verbal agreement on price, contract to follow" is the standard.

Spotting Stalled Deals

A stalled deal is a deal that hasn't been updated in 7+ days. The AI flags these on your Dashboard (Today's Revenue Focus). Deal recovery is your highest-ROI activity.

- Check Dashboard daily for stale deals in the Today's Revenue Focus section
- A stale deal means: no email, no call, no note, no stage change in 7+ days
- Recovery action: send a direct re-engagement email or WhatsApp message
- If no response in 21 days: move to Lost or Closed — keep the pipeline clean
- Sort by Last Activity in list view to find all stale deals at once

? Module 4 Exercise — Deals

Step-by-step:

- 1 Create 3 deals linked to existing contacts. Set a realistic value and close date for each.
- 2 Move each deal to a different stage: one to Proposal, one to Negotiation, one stays in Qualification.
- 3 After each stage move, add a note: what happened that caused the deal to advance?
- 4 Add a task to each deal: "Follow up in 3 days" with a due date.
- 5 Sort deals by Last Activity. Identify any deals not touched in 7+ days.
- 6 For each stale deal: send a re-engagement email from within the deal record.

QUICK REFERENCE

- Always link a deal to a contact — this connects all communication history.
- Title deals specifically: "Company — Product — Phase" format.
- Set expected close date on every deal — required for forecasting.
- Log a note after every stage move — "if it's not logged, it didn't happen".
- Stale = no update in 7 days. Check daily. Act immediately.
