

MODULE 6

The AI Features — Work Smarter

Goal: Let the system handle the thinking so you can focus on relationships and decisions.

IN THIS MODULE

- 01 What the AI can and can't do — setting the right expectations
- 02 AI Today brief — your daily briefing from Clarity
- 03 Drafting emails and replies with AI assistance
- 04 Contact summarisation — understand any contact in 10 seconds
- 05 Top AI actions — letting the system surface what needs attention
- 06 When to trust AI suggestions and when to override them

What AI Can and Can't Do

The AI in webXpanse is a co-pilot, not an autopilot. It reads your data, suggests actions, drafts messages, and flags risks — but it doesn't replace your judgement on relationships and deals.

- CAN: Draft emails based on deal context and contact history
- CAN: Flag stale contacts, overdue tasks, and at-risk deals
- CAN: Summarise a contact's full history in seconds
- CAN: Suggest next best actions based on pipeline signals
- CAN'T: Replace a genuine conversation or read tone accurately every time
- CAN'T: Make final decisions on deal terms or pricing
- RULE: Always read AI output before sending. Edit to sound like you.

? AI saves time on drafting and surfacing insights. You save time for relationship-building and judgment calls.

AI Control Center

The AI Control Center is your master switch. Use it to set how aggressively the AI acts across different surfaces — from fully manual (you approve everything) to suggest-only or auto.

- Emergency Presets: Pause All, Safe Mode, Full Auto
- Surface Controls: Email Assistant, Task Automation, Deal Automation
- Current mode shown per surface: Normal / Suggest Only / Paused
- Recent changes log — audit trail of who changed what and when
- Start in Suggest Only mode. Graduate to auto once you trust the outputs.

Email Assistant — AI-Drafted Replies

The Email Assistant helps you draft responses to conversations. It reads the full thread history and your contact's profile, then suggests a contextually appropriate reply.

? *AI email drafts are a starting point, not a final product. Editing takes 60 seconds. Starting from scratch takes 5 minutes.*

- Open a conversation in the Inbox or a contact's email history
- Click "Draft with AI" or use the compose toolbar
- Review the draft — it will sound like a template until you personalise it
- Edit: adjust tone, add specifics, remove anything generic
- NEVER send an AI draft without reading it. Always add one personal detail.

? **Read before you send. An AI email that sounds robotic will damage trust. Add your voice.**

Contact Summarisation

When you open a contact you haven't spoken to in weeks, you need context fast. The AI Summary reads their full history — emails, notes, deals, calls — and gives you a 3-line brief.

- Find the AI Insights & Context panel on any contact detail page
- Click "Generate Summary" to get a plain-language brief
- Summary includes: last interaction, current status, key context, suggested action
- Use before any call or meeting to re-establish context in 10 seconds
- Summary quality depends on logged activity — log more, get better summaries

Top AI Actions — Let the System Surface Priorities

The AI continuously monitors your pipeline and surfaces the actions with the highest impact. These appear on the Dashboard Today view and in the Clarity chat.

- Stale deals — flag deals not updated in 7+ days
- Overdue tasks — surface tasks past their due date
- Unresponsive contacts — contacts with no reply in 21+ days
- Pipeline gaps — alert when your pipeline drops below a healthy threshold
- Completion opportunities — tasks the AI can auto-complete based on detected actions

When to Trust AI vs. When to Override

The AI is calibrated on your historical data. The more you log, the better it gets. Override when the AI recommendation doesn't match what you know about the relationship.

- TRUST: Risk flags and stale contact alerts — the data doesn't lie
- TRUST: Email draft structure and tone for warm leads
- TRUST: Task suggestions based on deal stage and contact history
- OVERRIDE: Pricing suggestions that don't match your market knowledge
- OVERRIDE: Email tone when the relationship is unusually informal or sensitive
- OVERRIDE: Close date predictions when you have inside knowledge
- After overriding: log a note explaining why — it trains the AI

? Module 6 Exercise — AI Features

Step-by-step:

- 1 Open the AI Control Center. Note your current mode per surface. Set Email Assistant to Suggest Only.
- 2 Find a stalled deal on your Dashboard Today view (overdue 7+ days).
- 3 Open the linked contact's record. Read the AI Risk Flags and Next Best Actions.
- 4 Click "Draft with AI" for a follow-up email to this contact.
- 5 Read the draft carefully. Edit it: add one specific personal detail, adjust tone.
- 6 Send the email. Log a note: "Sent AI-assisted re-engagement email. Edited X and Y."
- 7 Check the AI Diagnostics page. Note any blocked actions and resolve them.

QUICK REFERENCE

- AI = co-pilot, not autopilot. Always review before acting.
- Never send an AI email without editing. Add one personal detail minimum.
- Logging more = better AI. Notes, calls, emails all feed the model.
- Override with a note — this trains the AI for next time.
