

MODULE 2

Contacts — Your Most Valuable Asset

Goal: Build, organise, and maintain a contact database that actually helps you close deals.

IN THIS MODULE

- 01 Adding contacts: manual, CSV import, and inbound capture
- 02 Contact fields — what to fill in and what not to skip
- 03 Stages, tags, and filters — organising for scale
- 04 Activity timeline — every touch in one place
- 05 AI insights: risk flags, next best actions, communication intelligence
- 06 Company context — linked deals, tasks, and data quality

The Contacts List — Your Pipeline View

The Contacts page is more than a directory. It shows every lead's stage, quality score, and last activity — so you can spot who needs attention without opening each record.

? *Contacts without a stage are invisible to pipeline reporting. Always assign a stage when adding a contact.*

- Stage tabs (New, Contacted, Qualified, Proposal, Negotiation, Won, Lost) — click to filter instantly
- Search by name, email, or company
- Tag filter — find contacts by segment or campaign
- Quality score — AI-calculated completeness and engagement rating
- Bulk actions — select multiple and reassign, tag, or export at once

Contacts list — stage tabs, search, filter bar

Adding & Importing Contacts

You can add contacts three ways. Manual is for one-off adds. CSV import is for bulk onboarding. Inbound capture happens automatically through forms, WhatsApp, or email replies.

- New Contact button — fill in name, email, phone, company, stage
- Import CSV — maps your spreadsheet columns to system fields in 3 steps
- LaunchPad — guided bulk-add with validation and duplicate detection
- Inbound capture — new form submissions become contacts automatically
- Minimum required: first name + email OR phone (never skip both)

Contact list with quality scores and stage badges

Contact Fields — What to Fill In

Incomplete contacts reduce AI accuracy and make targeting impossible. Fill these fields on every contact you add.

? *Missing fields = missing intelligence. The AI cannot suggest next actions without knowing role, company, or source.*

- Email — required for outreach automation
- Phone — required for WhatsApp and call logging
- Company — connects this contact to company-level deals
- Stage — where they sit in your pipeline right now
- Lead Source — how they found you (form, referral, social, WhatsApp)
- Job Title — helps the AI tailor communication tone
- Location — enables regional filtering and timezone awareness

? Use Quick Edit (right panel) to update fields without opening the full edit form — saves 30 seconds per contact.

Quick Edit & Inline Updates

The Quick Edit panel lets you update the most important fields without leaving the contact view. Use it after every call or meeting.

- Update phone, company, role, and location inline
- Change stage with a single dropdown — no full page load
- Save with one click — change is reflected immediately in the list view
- Use it after every touchpoint: "Called ? no answer ? update to Contacted"

Activity Timeline — Log Every Touch

The Activity Timeline is the history of your relationship with a contact. Every email, call, note, and deal is visible in one scrollable feed. If it's not here, it didn't happen.

? *The timeline is what the AI reads to generate summaries, next actions, and risk flags.*

- Email — sent and received messages linked to this contact
- WhatsApp — conversation thread history
- Notes — your written observations and follow-up context
- Deals — deal cards linked to this contact
- Tasks — actions assigned for this contact
- Meetings — calendar events and meeting notes

? **Log a note after every call. Future you (and your AI) will thank you.**

Adding Notes

Notes are your private memory for each contact. Use them to capture what was said, what was promised, and what to do next. The rich text editor supports formatting, links, and private-only visibility.

- Title is optional — leave blank for quick notes
- Tick "Private note" to hide it from teammates
- Reference deal names, objections, or timelines in the note body
- Notes appear in the Activity Timeline and are read by the AI for next-action suggestions

Relationship Timeline — all channels in one view

Notes editor — rich text, private option

AI Insights — Risk Flags & Next Actions

The AI scans each contact and surfaces two things: what's wrong and what to do about it. Check these panels before any outreach.

? *Risk flags don't fix themselves. A flag means you need to act within 24 hours or the contact goes cold permanently.*

- Risk Flags — "No response in 21 days", "Contact is stale", "Missing critical fields"
- Next Best Actions — AI-recommended next steps: re-engage, complete fields, schedule call
- Communication Intelligence — preferred channel, sentiment trend, objections, unresolved commitments
- AI Insights & Context — enrichment status and enriched data (company, role, social)

Company & Account Context

When a contact is linked to a company, you see all related contacts, shared deals, tasks, and a data quality score in one panel. This is where account-based selling lives.

- Related Contacts — all people from the same company
- Shared Records — how many deals, invoices, and tasks link to this company
- Data Quality — completeness score, stale flag, duplicate warnings
- Missing fields flagged in red — click to complete them

? Module 2 Exercise — Contacts

Step-by-step:

- 1 Go to Contacts ? Import CSV. Download the sample template and fill in 20 contacts.
- 2 Import the file. Review any errors in the import log and fix them.
- 3 Use the Tag filter to segment your contacts: add a tag "ICP" to your best-fit leads.
- 4 Open one contact. Fill in all missing fields shown in the Data Quality panel.
- 5 Add a note to 5 contacts describing where they are in your sales process.
- 6 Check the Risk Flags panel on 3 contacts. Take the suggested Next Best Action for each.
- 7 Review the Communication Intelligence panel — note the preferred channel for each.

QUICK REFERENCE

- Minimum fields: name + email or phone + stage + lead source
- Stage must always be set — drives all pipeline reporting
- Log notes after every call or meeting — "if it's not in the CRM, it didn't happen"
- Risk flag = act within 24 hours or lose the lead
- Import URL: acrm.webxpanse.com/contacts_import.php
