

MODULE 5

Tasks — Nothing Falls Through the Cracks

Goal: Use tasks to track every commitment you make — and ensure every follow-up actually happens.

IN THIS MODULE

- 01 Tasks vs. calendar events — when to use each
- 02 Creating tasks from conversations, deals, and contacts
- 03 Due dates, priorities, and assignments
- 04 Your daily task view — start and end of day routine
- 05 Managing overdue tasks before they pile up

The Tasks Dashboard

The Tasks page shows all your actions in one place. Status cards at the top give you an instant health check: how many are pending, in progress, overdue, and completed today.

? An overdue task means you missed a commitment. Three or more overdue = your follow-up system has broken down.

- Pending — tasks not yet started
- In Progress — tasks actively being worked on
- Completed — done today (resets daily)
- My Tasks — only tasks assigned to you
- Overdue — tasks past their due date (red — act immediately)
- AI Starter Tasks — actions the system recommends based on your data gaps

? Check your overdue count first thing every morning. Zero overdue is the goal.

Tasks overview — status cards and list

Creating Tasks

Create a task any time you make a commitment or identify an action that needs to happen. Link it to the relevant contact or deal so context is always attached.

- Title — be action-specific: "Call Amara re: pricing" not "Call"
- Due Date — always set one. Tasks without due dates never get done.
- Priority — Urgent/High for today, Medium/Low for this week
- Assigned To — you or a teammate
- Link to Contact — connects task to the contact's activity timeline
- Description — any context needed to complete the task

Create Task form

Tasks vs. Calendar Events

Tasks and events serve different purposes. Understanding the difference prevents double-booking and keeps your workflow clean.

- Task — an action YOU need to do: "Send proposal", "Make follow-up call"
- Event — a scheduled time block with another person: "Demo call at 2pm"
- Use tasks for solo actions with a deadline
- Use events for meetings, calls, and appointments that go in your calendar
- Tasks appear on the Tasks page and Dashboard. Events appear in the Calendar.
- Link both tasks and events to the same contact for complete history

Daily Task Routine

Start and end every day with a quick task review. This 5-minute habit prevents things from falling through the cracks and keeps your pipeline moving.

- MORNING (5 min): Open Tasks ? check overdue first ? work through "due today"
- As you complete tasks: mark them done immediately — don't batch it
- Create new tasks as commitments arise during the day
- EVENING (5 min): Review "due tomorrow" ? adjust priorities if needed
- Any overdue tasks not resolved today: reschedule or escalate

? "Check tasks before checking email." Email is reactive. Tasks are proactive.

? Module 5 Exercise — Tasks

Step-by-step:

- 1 Go to Tasks. Count your overdue tasks. Resolve or reschedule all of them right now.
- 2 Create a 5-task follow-up sequence for one of your open deals:
- 3 Task 1: "Send proposal" — due today
- 4 Task 2: "Follow up call" — due in 3 days
- 5 Task 3: "Check in if no reply" — due in 7 days
- 6 Task 4: "Re-engagement email" — due in 14 days
- 7 Task 5: "Close or lost decision" — due in 21 days
- 8 Link all 5 tasks to the deal's contact record.
- 9 Set priorities: Task 1 = High, Task 2 = High, Tasks 3–5 = Medium.
- 10 Tomorrow morning: open Tasks first before your email. Report back on what you found.

QUICK REFERENCE

- Tasks without due dates never get done. Always set a date.
- Link tasks to contacts — creates a complete relationship history.
- Overdue = broken commitment. Zero overdue is the daily goal.
- The task feed IS your CRM activity log. Use it.
