

MODULE 8

Reporting & Optimising Your Workflow

Goal: Know your numbers, spot patterns, and make decisions that move your pipeline forward.

IN THIS MODULE

- 01 Reading your dashboard summary: the 5 numbers that matter
- 02 Running a weekly pipeline review in 15 minutes
- 03 Spotting patterns: where do deals stall? Which contacts go cold?
- 04 Using filters and saved views for your most common checks
- 05 What good looks like at 30, 60, and 90 days

The 5 Numbers That Matter

You don't need to track everything — you need to track the right things. These 5 metrics tell you the health of your entire sales operation at a glance.

? *Vanity metric: total contacts. Actionable metric: contacts moved to Qualified this week.*

- 1. New Contacts Added — top of funnel. Target: 5–10 per week minimum.
- 2. Conversations Started — how many new threads opened this week.
- 3. Deals Advanced — how many deals moved to the next stage.
- 4. Tasks Completed On Time — ratio of done vs. overdue. Target: >80%.
- 5. Pipeline Value by Stage — total KSh in each stage. Look for imbalances.

? **If any of these 5 is trending down for 2 weeks in a row, stop and investigate before it becomes a problem.**

Dashboard Charts — Trends Over Time

Below the metric cards, the Dashboard shows trend charts. These are more useful than snapshots because they reveal direction — are things getting better or worse?

- Contacts Created (Last 7 Days) — is your top-of-funnel growing?
- Email Performance — sent vs. opened trend — is your outreach landing?
- Stage Distribution — where is contact flow getting stuck?
- Deal Value by Stage — is value moving forward or pooling in early stages?

Analytics — Deeper Reporting

The Analytics page goes beyond the dashboard. Use it for weekly reviews, team performance checks, and identifying patterns in your pipeline.

? *The analytics page is only as good as your data. Contacts without activities, deals without notes = blank charts.*

- Contact creation trends — are you adding enough new leads?
- Deal stage conversion rates — where is your pipeline leaking?
- Email open and reply rates — which outreach is working?
- Activity volume — calls, emails, notes per rep per week
- Pipeline velocity — how long does a deal take to move through each stage?

The 15-Minute Weekly Pipeline Review

Every Friday (or Monday morning), run this review. It takes 15 minutes and gives you a clear action plan for the week ahead.

- Step 1 (2 min): Open Dashboard. Check your 5 numbers vs. last week.
- Step 2 (3 min): Open Deals. Filter by "Last Activity" oldest first. Identify stale deals.
- Step 3 (3 min): For each stale deal: decide — advance, nurture, or close as lost.
- Step 4 (3 min): Open Tasks. Resolve all overdue. Reschedule if needed.
- Step 5 (2 min): Open Analytics. Check stage distribution. Any stage with 5+ contacts = needs attention.
- Step 6 (2 min): Set 3 priorities for the week. Create tasks for each.

Using Filters & Saved Views

Saved filters let you create custom views you return to every week without reconfiguring. Set these up in your first week.

- Contacts: filter by Stage=Proposal + Last Activity > 7 days = your stale proposal list
- Contacts: filter by Stage=New + Lead Source=Form = fresh inbound to qualify
- Deals: sort by Expected Close Date ASC = what should close soonest
- Tasks: filter by Status=Overdue + Assigned To=Me = my personal action list
- Save each filter as a Saved Search — access from the More menu

What Good Looks Like — 30 / 60 / 90 Days

Your metrics will look different at each milestone. Use these benchmarks to assess whether you're on track.

- Day 30: Database imported and clean. First deals created. Tasks running. No overdue > 2.
- Day 30: Inbox habit established. Templates built. Notifications configured.
- Day 60: Weekly review habit running. Stale deal rate < 20%. Pipeline has 10+ active deals.
- Day 60: AI outputs reviewed daily. Email assistant in use. Contact summaries used before calls.
- Day 90: Predictable pipeline. Conversion rate per stage tracked. 1+ deal closed from CRM.
- Day 90: Ready to scale: add team members, enable automation, or increase lead volume.

? Module 8 Exercise — Weekly Review

Step-by-step:

- 1 Open your Dashboard. Write down your 5 key numbers right now.
- 2 Open Deals. Sort by Last Activity (oldest first). List every deal not touched in 7+ days.
- 3 For each stale deal: email or WhatsApp the contact today. Use AI to draft if needed.
- 4 Open Tasks. Count overdue. Resolve or reschedule all of them.
- 5 Open Analytics. Find the stage with the most contacts stuck. Identify why.
- 6 Create 3 priority tasks for this week. Assign due dates and mark High priority.
- 7 Set a recurring calendar reminder: "CRM Weekly Review" — every Friday at 9am, 15 minutes.

QUICK REFERENCE

- 5 metrics: New Contacts, Conversations Started, Deals Advanced, Tasks Done On Time, Pipeline by Stage.
- Weekly review takes 15 minutes. Do it every week without exception.
- Stale deal (7 days no update) = act today or lose it.
- 30/60/90 benchmarks: clean data ? active pipeline ? predictable revenue.
