

Investor One-Pager

Company

Working company description:

An AI operating CRM for distributors and wholesalers in WhatsApp-first markets.

Problem

Many distributors and wholesalers run revenue-critical workflows across WhatsApp, email, spreadsheets, and disconnected CRMs.

The result:

- slow response times
- inconsistent quoting
- weak follow-up discipline
- deal leakage between inbox, sales, and finance
- poor auditability when teams try to automate

Generic CRMs store data, but they are not designed to run high-frequency message-led commercial operations with strong control, auditability, and workspace-governance requirements.

Solution

We are building an AI operating platform that turns the CRM from a system of record into a system of action.

The first workflow wedge is:

inbound inquiry -> qualification -> quote/proforma draft -> follow-up -> deal progression -> invoice/collection follow-through

The product combines:

- unified inbox
- WhatsApp and email workflows
- deal and task orchestration
- quote and invoice support
- governed AI/autonomy controls
- auditability and safety-gate thinking

Why Now

AI is making workflow automation and agent-like execution practical
investors are actively backing vertical AI and systems of action

WhatsApp-first commercial teams remain underserved by legacy CRM products
platform security, data governance, and workflow control are increasingly valuable where data sensitivity and customization requirements are high

External context:

NVCA/PitchBook reported AI/ML captured 65.6% of US VC deal value in 2025
Crunchbase reported strong 2025 venture activity, while seed remained concentrated and selective
Bessemer and Sequoia continue emphasizing vertical AI and narrow high-ROI wedges

Raise

Recommended raise framing:

small pre-seed or angel round
purpose:

- finish the wedge
- land 3-5 design partners
- build measurable proof
- sharpen GTM before a larger seed process

Closing Line

We are not trying to out-feature Salesforce. We are building an AI-driven operating layer for a painful commercial workflow that legacy CRM products do not run well.

Why This Can Win

- narrower starting wedge than incumbent CRMs
- stronger fit for message-heavy commercial workflows
- secure workspace governance and governed execution from the start
- AI roadmap is operational, governed, and auditable rather than chat-only
- expansion path from workflow wedge to broader operating platform

Product Proof Points From Current Build

- contact, deal, task, and reporting foundations are already present
- unified inbox and communication workflows already exist
- quote, invoice, and commercial automation capabilities are already present
- AI control and autonomy governance thinking are already built into the roadmap and audit layer

Go-To-Market

Initial GTM:

- recruit 3-5 design partners
- prove ROI in one wedge workflow
- convert pilots into paid customer workspaces
- expand within the same account from messaging and quoting into collections and workflow execution

What We Need To Prove Next

- design partner demand for the narrow wedge
- time-to-value inside 30-60 days
- measurable ROI:
 - faster quote turnaround
 - shorter reply times
 - more recovered leads
 - improved follow-up completion
 - reduced manual ops load
